

POWERING THE INTELLIGENT DEVICE ECOSYSTEM

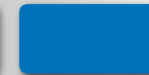

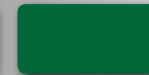

Lighting devices are becoming more intelligent, more connected. To building management systems, to the internet, to smart phones.

Your intelligent luminaires require more powerful components, and TRP is here to support you with a whole new level of performance, capability and flexibility. Our new products will increase your speed to market, simplify your manufacturing and power the controls that make your products *intelligent*.

We provide everything that you need to go into your luminaire. Our group also provides controls that allow you to offer your customers everything they need for their application. We want to help you offer the complete package.

We're breaking down our product offerings into three levels of control and connectedness. Now you can make intelligent choices for your product line:

Intelligent Device ECOSYSTEM

Classic

Our standard products

- Fixed-output LED drivers
- LED Light Engines
- Surge Protectors
- Step-down Transformers
- HID restrike Controls

Dynamic

Products that offer more features, capability and flexibility

- LED Drivers
- Stand-alone OEM controls

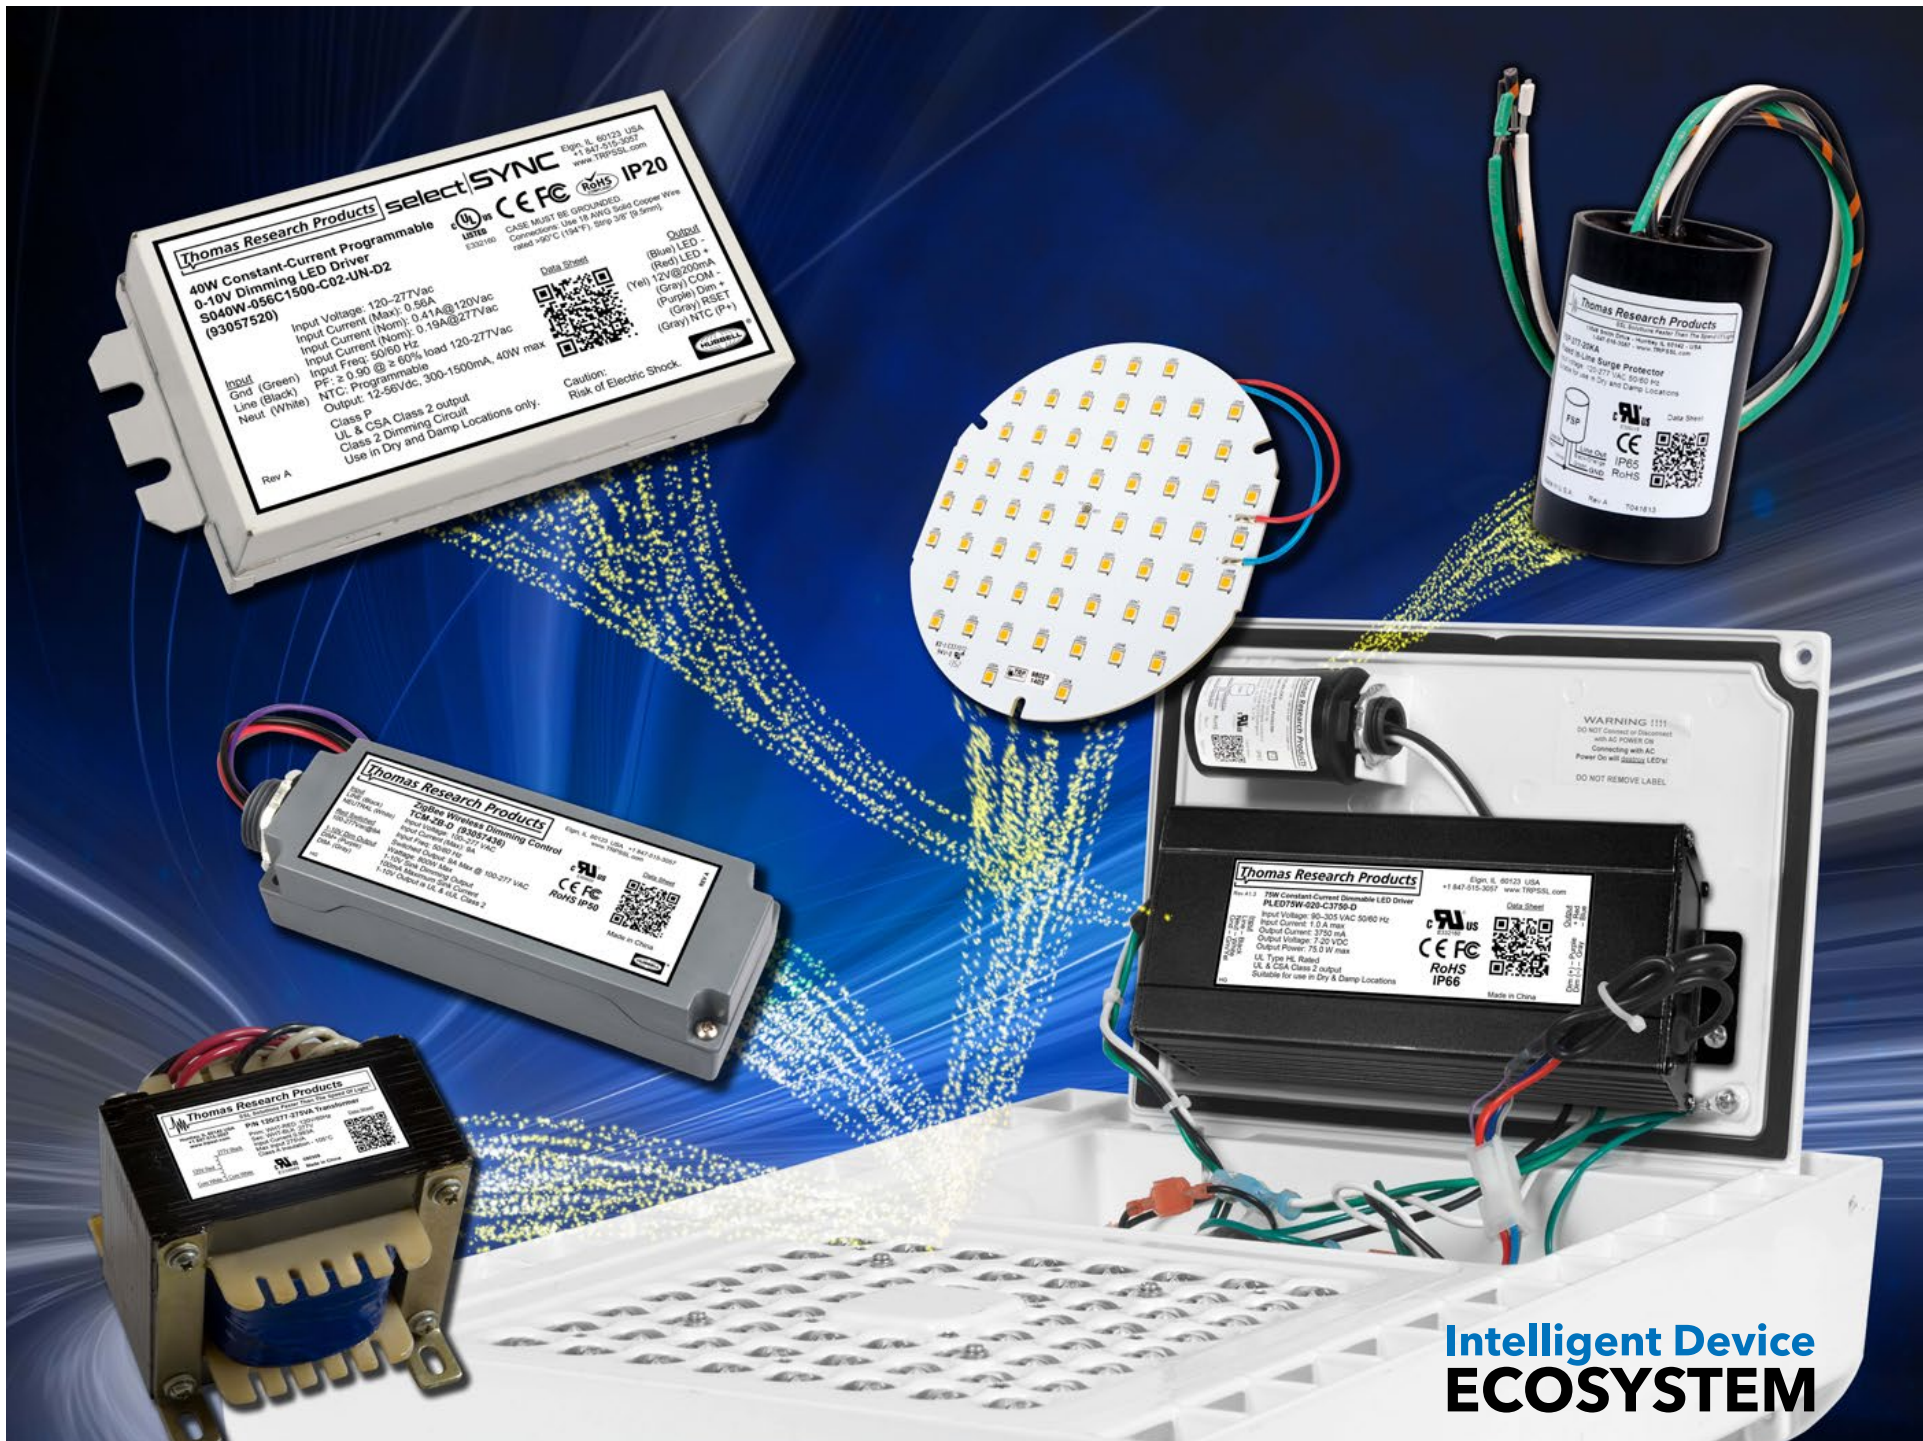

Intelligent

Products that are controls-ready, contributing to your entry into the Internet of Things.

- LED Drivers
- OEM controls for open-standard networks (ZigBee, Daintree, DALI, etc.)
